

New supertaggers for the ERG

for the DELPH-IN summit

Olga Zamaraeva & Carlos Gómez-Rodríguez

Department of Informatics/CITIC, Universidade da Coruña

July 17 2022

Introduction: Supertagging

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

New experiments

References

- ▶ Supertagging is like POS tagging:
 - ▶ Sequence-to-sequence statistical problem
 - ▶ input seq: sentence or text
 - ▶ output seq: tags corresponding to each token*
 - ▶ usually with more fine-grained tags
 - ▶ e.g. lexical types in HPSG grammars

Supertagging is useful for e.g. >0

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

New experiments

References

- ▶ word sense disambiguation
- ▶ parse ranking
- ▶ **improving parsing speed**

Supertagging for parsing speed

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

New experiments

References

- ▶ Without tagging:
 - ▶ many tokens can be mapped to more than one lexical entry/type
- ▶ Tagging helps eliminate unlikely possibilities
 - ▶ less things for the parser to go through

1

2

Supertagging accuracy is important

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

New experiments

References

- ▶ Supertagging can mean discarding all possibilities but one
- ▶ If a wrong lexical type is predicted:
 - ▶ the chances of getting the parse right are 0

1

2

Prior work on supertagging for HPSG

for the DELPH-IN
summit

Introduction

Baseline

New experiments

References

model	grammar	training tok	tagset size	speed-up factor
N-gram (Prins and van Noord 2004)	Alpino (Dutch)	24 mln	1365	2
HMM (Blunsom 2007)	ERG (English)	113K	615	8.5
MEMM (Dridan 2009)	ERG (English)	158K	676	12

- ▶ Dridan (2009):
 - ▶ 92% accuracy on in-domain data
 - ▶ 74.6% out of domain (up to 80.8% with additional training data)
- ▶ Recent **related** work on CCG (Liu et al. 2021):
 - ▶ 95.5% accuracy in domain
 - ▶ 81% and 92.4% on two out-of-domain datasets

New experiments with ERG 2020

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

New experiments

References

- ▶ Supertagging (no ubertagging)
- ▶ Single tag accuracy (top 1)
- ▶ Tagset: 1127
- ▶ Not yet integrated into any parser

dataset ¹¹	description	sent	tok	train tok ¹²	MaxEnt	SVM	neural
cb	technical essay	769	17,244	0	88.96	89.53	91.94
ecpr	e-commerce	1207	11,550	24,934	91.80	91.99	95.09
jh*,tg*,ps*, ron*	travel brochures	2102	34,098	147,166	90.45	91.21	95.44
petet	textual entailment	602	7135	1578	92.88	95.31	96.93
vm32	phone customer service	1034	8730	86,630	93.57	94.29	95.62
ws213-214	Wikipedia	1613	29,697	161,623	91.31	92.02	93.66
